(a) Image-to-fMRI Encoder

Can predict fMRI for unseen images

(b) Problem Definition

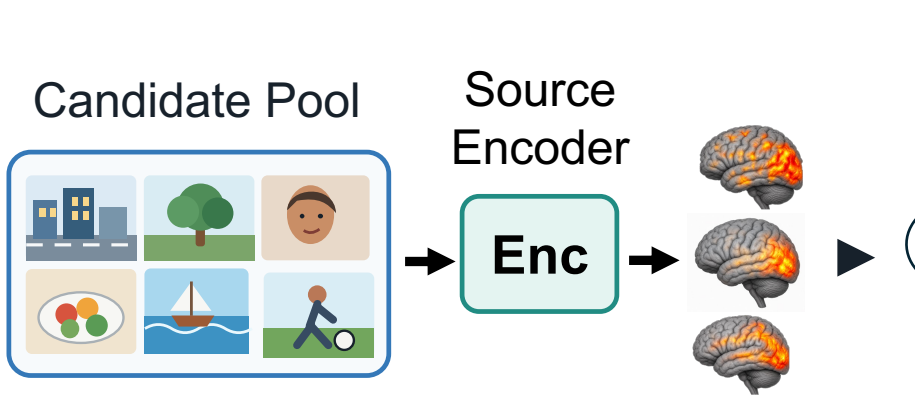

Given a limited fMRI scanning budget, which images should we scan to train a strong encoder?

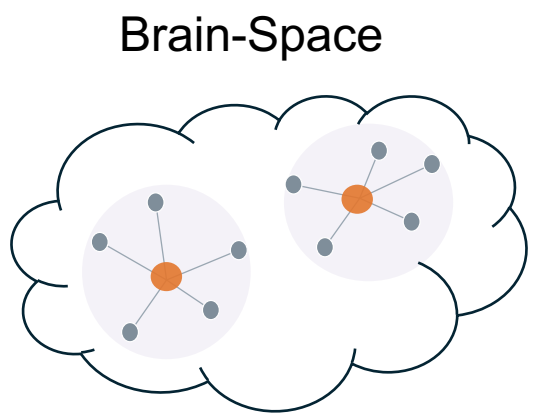

(c) Our Approach: Selecting Images that Cover Brain-Space of Previously Scanned Subject

Source Subject (previously scanned)

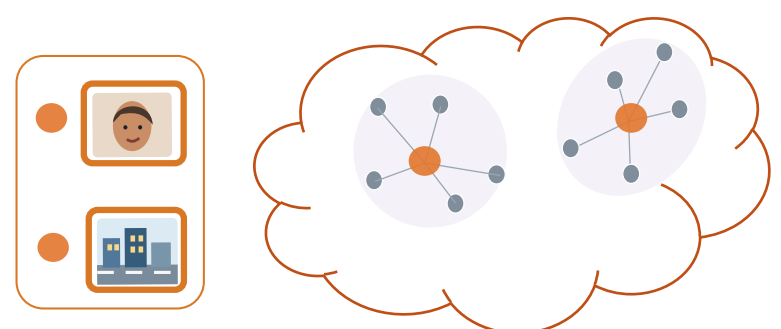

Which images yield predicted responses that best cover Brain-Space?

Target Subject

Generalization: Chosen images cover the target subject Brain-Space

Selected Images
